

Harrow Disc Blades

Harrow disc blades are engineered to effectively till the soil, breaking apart clods and shredding unwanted weeds or crop residue. This process is essential for creating a fine seedbed suitable for planting. The blades are organized into gangs (rows) and affixed to a common shaft. Depending on the specific design of the disc harrow, it may feature either single or multiple gangs.

DISC BLADE (NOTCHED & PLAIN)

Product Code	Diameter		Thickness	Concavity
	inches	mm	mm	mm
DB-12	12	305	3	25
