

# Rotary Tiller Blades

Rotary tiller blades, commonly referred to as cutters, are essential components of a rotary tiller, playing a pivotal role in soil preparation. These blades are designed to break up and aerate the soil, creating an ideal seedbed. As they rotate, the blades effectively till the soil, incorporating organic matter and cutting through weeds and crop residues. Their sharp cutting edges enable efficient penetration and slicing through the soil, while the curvature of the blades facilitates the lifting and turning of the earth. Mounted on a rotor that spins, the blades allow for continuous tilling as the rotary tiller advances.

## ROTARY TILLER BLADES / ROTARY HOES / ROTAVATOR BLADES

Product Code	Type	Flat Size	Dia. Ø	Holes distance	Dimensions	Weight per piece	Machine brand name
